
STEP 2

Decide on your country's context.

CONSIDER THE FOLLOWING:

What is your country's National Policy around Social Protection?

- What is the National SP policy?
- Does it reflect plans for integration?
- If so, what are the policy priorities in terms of integration?
- Who are your primary, secondary and tertiary users?
- What are the legislative foundations for Social Protection?
- What is the level of decentralization?

Broad e-governance

- Does a broader e-governance platform exist? If so, what's its status?
- What are the existing legal provisions for data security and protection?
- What other government information systems could share data?
Are links with these desirable? Why?
- Do you have a National ID system that can be used as an identifier?

Existing programs and their business processes

- Which social protection programs currently exist in your country?
- Which of these are integrated and if not, which could be integrated?

Information requirements

- What are their information needs of your primary, secondary and tertiary users?
